WHO ARE YOU TRYING TO BECOME?

❖ IN THE UNITED KINGDOM / AUSTRALIA

- **BARRISTER: role based on advice and advocacy.**

If the barrister works in an independent practice, they are members of the **Independent Bar.** A barrister is an advocate with rights of audience in every court of justice. A barrister is not allowed to be approached by their clients in order to ensure their impartiality.

If the barrister is not independent but employed by private entities, the Armed Forces, Local governments or trade unions; they are members of the **Employed Bar.** Their major role is advisory. Their responsibilities include providing legal services to their employers – and not clients -, participating in the drafting of new legislation or in interpretation Community Legislation for their own employers.

- **SOLICITOR: preparatory work**

A solicitor's job is to prepare cases and give advice on legal subjects. They can represent their clients in lower courts of justice.

In most cases, a solicitor works as the mediator or intermediary between the barrister and the clients.

❖ IN THE UNITED STATES

The terms "barrister"/ "solicitor" are not widely used, as opposed to "attorneys" or "litigators".

⇨ court-going barrister are called "litigators."

⇨ solicitors are called "corporate/transactional attorneys", in accordance to their speciality (a healthcare attorney, a real-estate attorney …).

Once an attorney is admitted to the bar in one state, they are allowed to practice the kind of law of their choosing.

RECAP 3. Exploring the English and American Legal Systems

English LAW

Quick reminder from FRIESON

"English Law **refers to the legislation applicable to** England and Wales. The legislative **frameworks** were not merged in Scotland and Ireland. "Scots law is a different **body of rules**, with distinct traditions and a distinct history, even though in the twentieth century, with the proliferation of legislation and the internationalisation and standardisation of commercial transactions, for instance, there are more and more similarities between English Law and the law applicable in Scotland. In the same way, the law of Northern Ireland is different from either of these systems: and yet legislation has gained so much importance in the last fifty years that the law applicable to Northern Ireland or to Scotland is coming closer and closer to, when it is not identical with, that applicable to England and Wales. […]

The sources of English Law refer to the origins of the rules of law. More concretely, whenever a lawyer wants to **build up the argumentation of a case**, whenever judges have to make decisions, what kinds of materials do they resort to? The answer is to be found in the two main sources of English law, i.e. **case law and legislation**, and in addition, in **Community Law** which often **takes precedence over** national law. It has been so since the UK became a member of the European Communities, on the 1st of January 1973. So other less important sources of law need to be mentioned, although categorised as **subsidiary sources**, i.e. Law Merchant, Local Custom, Canon Law, and Books of Authority.

It must be noted that English Law differs from Continental Law in so far as it is not based on Roman Law. English Law has not been Romanised: it has evolved in its own way, from Anglo-Saxon Times, through the Norman Conquest which may be considered as a most important **landmark, down to the present day.**

Case Law essentially **consists of judge-made law**, or court decisions, based on *Common Law and Equity.* It has grown through a pragmatic approach, out of precedents, which offered the law the advantage of stability and consistency. Common Law developed out of a unification of English Customs, but gradually, Equity grew as a remedy to the defects of the Common Law. Nowadays, Common Law and Equity remain vital sources of English Law.

Although case law embodies a very substantial source of English law, and the volume of case law is relatively more important than that of statute law, legislation, also called statute law, is today the dominant form of law-making.

Legislation which mainly consists of Acts of Parliament, or statutes, appeared later than case law, since Parliament did not come into being until 1265 when it was first set up by Simon de Montfort. But Parliament is sovereign. It is governed by the law of supremacy; that is why legislation is of fundamental importance. The courts are bound to apply statutes; if a conflict arises between a statute and a precedent, the statute prevails. The courts cannot **disregard** an Act of Parliament, and it is not for the court to examine whether an Act is invalid, because it **was obtained by some irregularity or fraud**. Therefore, legislation takes precedence over case law.

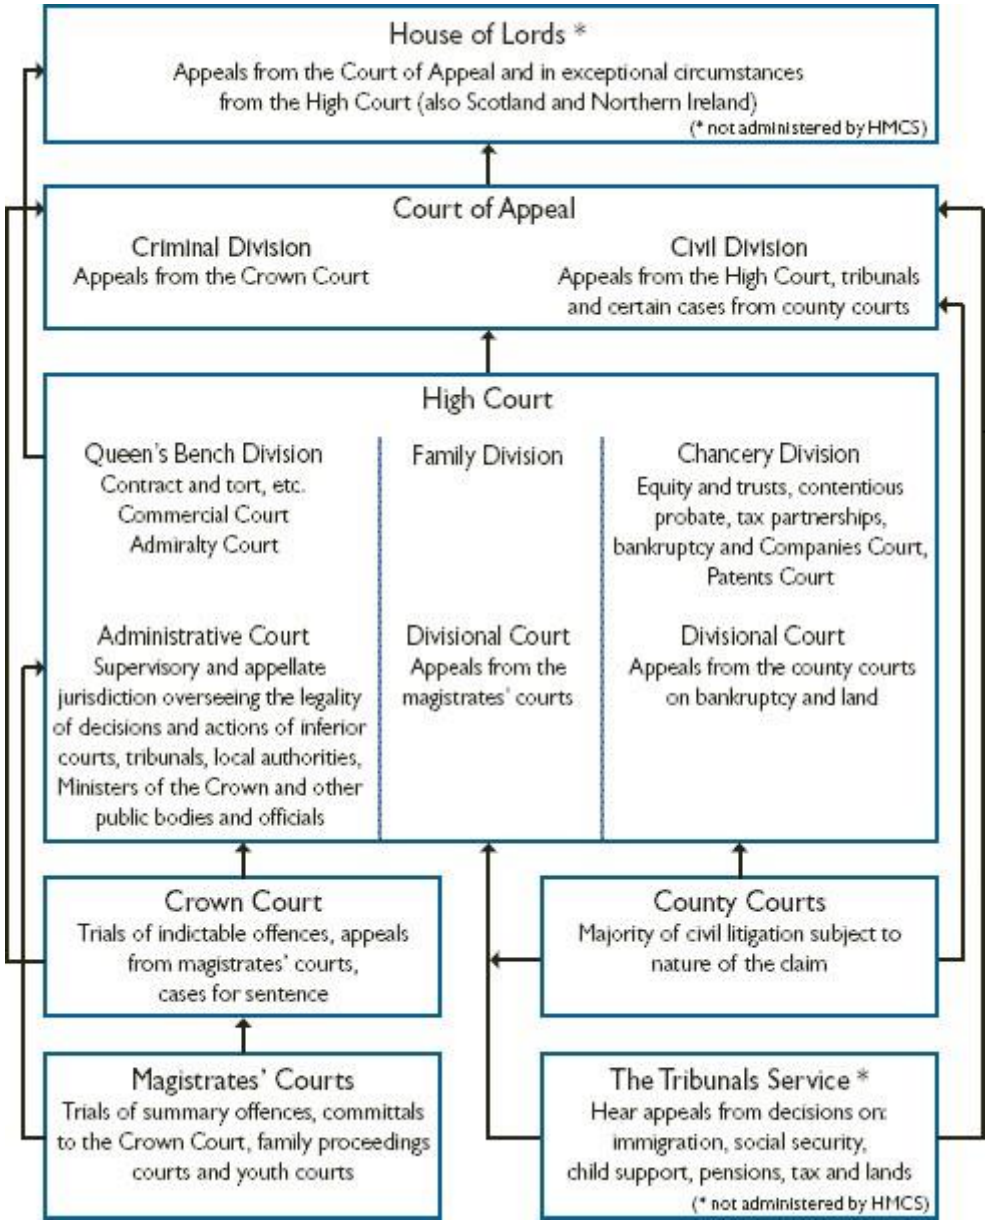

It should also be stressed as another characteristic of English Law that legislation **was not originally codified,** but it seems that a new trend towards codification, which already appeared at the end of the 19th century, is now well under way.

European Law, particularly as far as regulations, decisions, and **directives** are concerned has a binding force; consequently, it can take precedence over national law and may be considered as a major source of law.

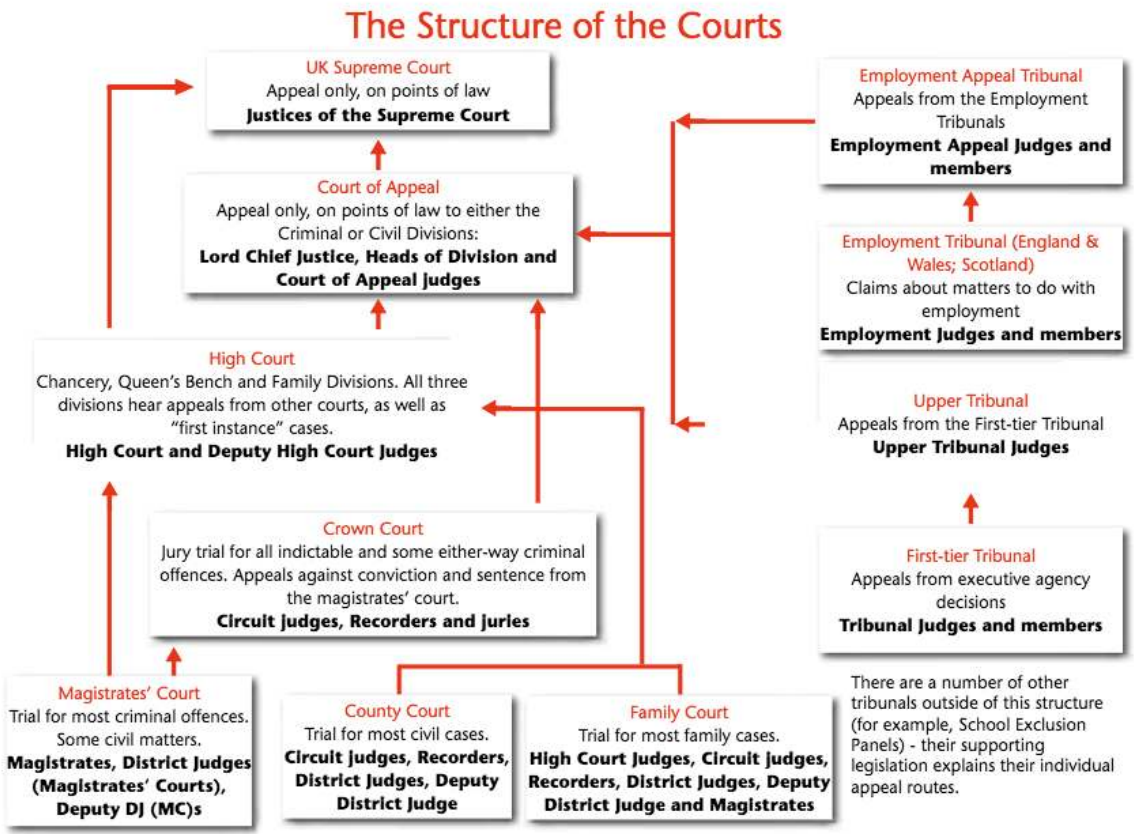

Subsidiary sources of English Law include:

- Law Merchant which dealt with trading customs, maritime practices, and local regulations related to markets and fairs; this mercantile law or *lex mercatoria* is still **traceable in** the law of insurance and in the law of negotiable instruments;
- Local customs: seldom applied. "

American Law

Three items to bear in mind:

❖ **The United States is a Federal System**

- it therefore means that federal laws are separate from state law. Each US state has their own laws and court systems. Bar associations also differ from one state to another.
- The states boast all the legal powers that the US Constitution didn't explicitly grant the Federal Government.
- Just like in the EU system, federal law and high court decisions tend to take precedence over state laws.

- **The Federal State follows a system of checks and balances that frame the role of the Supreme Court**

How to use verbs in English

Petit rappel. Le cœur de la phrase anglaise est le verbe – contrairement au français qui davantage nominal par essence. Ce qui signifie que les termes cruciaux que vous devez mobiliser sont des verbes. En revanche, les constructions verbales sont souvent en anglais « fixes », au sens où tel verbe va toujours se construire avec telle préposition, ou être suivi d'un autre verbe sous la forme -ING. Il est donc crucial de retenir et mobiliser les verbes prépositionnels et de connaître les construction verbales courantes en anglais.

Par exemple, vous direz en français : tout citoyen doit respecter les lois → en anglais : *all citizens must **abide BY** the laws.*

Verbal structure

En anglais, si vous utiliser deux verbes à la suite, « il n'aime pas manger des cerises » par exemple, vous avez trois constructions possibles :

- Verbe + TO + Verbe à l'infinitif → ex. He **wanted to know** the meaning of this song.
- Verbe + Verbe – ing → ex. She **dislikes eating** cherries.
- Verbe + TO + Verbe-ing → ex. I'm **looking forward to joining** the company.

Il faut donc les connaître !
